SUPPORT SERVICES

Drakken provides Operations, Maintenance and call off support for its clients. Our teams execute daily operation and maintenance of Electrical, Instrumentation and Automation systems for energy production facilities, industrial manufacturing and processing facilities and commercial buildings. Drakken employs highly trained electrical, instrumentation and automation personnel to provide a full service offering including: preventative maintenance, troubleshooting, high voltage switching, SAEP duties, control system modifications, equipment calibrations and configuration, facility upgrades, consultation services, hazardous area inspections, retrofits and remote automation support.

Drakken field personnel integrate with our engineering and project teams to deliver solutions quickly and effectively for each client and facility providing solutions in any location. By championing site safety, our activities are always completed with the highest regard to the safety of people, equipment and the environment.
